### **DETAILED ACTION**

Applicant's arguments filed 5/12/10 have been fully considered but they are not persuasive. Rejections and other issues not addressed below are withdrawn.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-9,11-16,18-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The last line in claim 1 recites "bacteria .... have a lag time upon re-hydration". However, the specification at paragraphs 31, 39 and 43 suggest that bacteria are "without lag time" upon re-hydration. Thus, there appears to be no support in the original specification for "bacteria ... have a lag time upon re-hydration".

Claims 14 and 15 recite "step of concentration". This does not appear to be explained in the original specification.

The following is a quotation of the second paragraph of 35 U.S.C. 112:  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites the limitation "still contains nutrients" in line 2. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ergashev et al. (SU 937436; 6/23/82), Karner (DE 19523334; 7/4/94) or Karner (EP 1186581; 3/13/02). Each reference teaches a method of applying to a granulated fertilizer bacteria (abstracts). Neither of the references teaches the application rate of fertilizer being less than 3 liters bacterial ferment per ton of granular fertilizer. It would have been obvious to one having ordinary skill in the art to term the optimum application rate. One would have been motivated to do this in order to produce a product that would have been most effective in promoting plant growth.

**Suggestions**

Make claim 16 an independent product by process claim including all of the claim limitations set forth in claim 1. Make sure that claim 16 recites the limitation regarding bacteria having no (or without lag time) upon re-hydration.

In claim 22 recite the limitation regarding bacteria having no (or without lag time) upon re-hydration.
